PROFILE SUMMARY

Dynamic and results-driven Certified DevOps professional with 8 years of hands-on experience in networking, virtualization, and private/public cloud environments. Specializing in cloud-native technologies and following DevOps principles to drive efficiency and innovation within complex technology landscapes for industries such as Telecoms, Internet Service Providers, Healthcare, SI, Fintech, and R&D.

CORE COMPETENCIES

Build & CI/CD: Jenkins, GitHub Actions, GitOps

Infrastructure as Code: Terraform, Ansible

Containerization & Orchestration: Docker, Kubernetes, Rancher, Container registry management, EKS

Cloud Platforms: AWS, Huawei, Infrastructure provisioning & management

Data: Kafka, Kafka Connect

Build Acceleration: Distributed systems, Performance optimization

Programming & Scripting: Python, Bash

Version Control: Gitea, GitHub, Bitbucket

Monitoring & Observability: Prometheus, Grafana, ELK Stack

API GATEWAY: ISTIO, NGINX

PROFESSIONAL CERTIFICATIONS

- **Certified Kubernetes Administration** 
- **ICA: Istio Certified Associate** 
- **Red Hat Certified System Administrator** 

CAREER EXPERIENCE

04/2022 – Present
Dubai

Devops Engineer, Peg B Technology | Dubai 

Kubernetes Platform & Microservices Deployment

- Deployed wallet platform microservices in Kubernetes for South America region with full observability
- Managed production K8s clusters with Rancher v2 for multi-cluster orchestration for payment platform in UAE
- Implemented Istio service mesh for API gateway, traffic management, and mTLS between services
- Configured and troubleshot message queues (Kafka) ensuring message delivery and fault tolerance
- Collaborated with teams to support microservice architectures

CI/CD Pipeline Development (Using Jenkins)

- Architected Jenkins CI/CD pipelines for 20+ microservices, reducing deployment time
- Implemented automated testing frameworks (unit, integration, security) in build pipelines

- Artifact management with versioning and retention policies
- Created Prometheus/Grafana dashboards for build metrics and pipeline monitoring

Cloud Deployment

- Architected hybrid-cloud environments using Huawei Cloud and on-prem for global deployments
- Provisioned cloud resources including compute, storage, networking, and databases
- Optimized container registries and implemented vulnerability scanning for Docker images
- Developed Infrastructure as Code templates for repeatable cloud deployments

07/2020 – 04/2022
Myanmar

System Engineer, GTMH Telecom | Myanmar [🔗](#)

System Infrastructure & Automation

- Deployed critical systems including Zimbra email, OSTICKET, and Zabbix monitoring for enterprise clients
- Automated configurations using Ansible playbooks, reducing manual tasks
- Managed Linux infrastructure with security hardening, patching, and performance tuning
- Troubleshoot complex network services (NFS, DNS, LDAP, SMTP, SNMP) ensuring 99.9% uptime

Container Platform Implementation

- Built Jenkins CI/CD pipelines from scratch, automating build and deployment processes
- Deployed Kubernetes clusters for microservices with auto-scaling capabilities
- Developed Ansible scripts reducing infrastructure provisioning from days to hours

Private Cloud Support

- Supported nationwide FinTech platform serving 10K+ users in Myanmar
- Managed VMware ESXi virtualization for private cloud customers
- Developed Bash scripts for automation, backup, and system maintenance

07/2019 – 07/2020
Myanmar

System Engineer, Fortune Broadband | Myanmar [🔗](#)

- Launched LTE/Fiber broadband system for 10K+ customers with integrated services
- Deployed LibreNMS monitoring with custom dashboards for service visibility
- Implemented PowerDNS authoritative server and migrated DNS zones
- Configured Exim SMTP server with billing system integration
- Managed ESXi virtualization and storage systems (SAN/NAS) for high availability

01/2018 – 01/2019
Myanmar

System Support Engineer, Sysnet System PTE Ltd | Myanmar [🔗](#)

- Deployed infrastructure solutions for global healthcare industry clients
- Automated system configurations with Ansible reducing downtime
- Managed storage systems for data and VM backups
- Created SOPs and technical documentation for knowledge sharing
- Configured monitoring systems and developed automated reporting tools

12/2016 – 01/2018
Myanmar

Junior System Administrator, RITZ Public Company Limited [🔗](#)

- Administered Linux systems including DNS, Apache, SSH, and file services
- Router, Switch configuration management
- Wrote shell scripts for automation, backups, and log collection
- Performed system troubleshooting, patching, and performance tuning

2014 – 2019
Yangon

BA (English), *University Of Dagon, Yangon*
